

ID MARKING EXAMPLES

HOW TO MARK NON-BULK PACKAGING

For non-bulk packages, identification numbers (also sometimes referred to as UN or NA numbers) must be marked in association with the proper shipping name.

For example, ID numbers along with the proper shipping names are often displayed along with the appropriate label:

Package Size	Marking Size (minimum)
All packages	0.47 inches (12 mm) high
For small packages: <ul style="list-style-type: none">• 8 gallons (30 L or less),• 60 pounds (30 kg) maximum, or• Cylinders with a water capacity of 16 gallons (60 L) or less	0.24 inches (6 mm) high
For smaller packages with a capacity of 1.32 gallons (5 L) or 11 pounds (5 kg) or less	Markings must be of a size appropriate for the size of the package

HOW TO MARK BULK PACKAGING

Hazardous materials identification numbers must be displayed on bulk packagings such as portable tanks, cargo tanks, and tank cars. The four-digit identification numbers may be displayed in one of several ways:

1. On an orange panel measuring 160 mm (6.3 inches) by 400 mm (15.7 inches) with a 15 mm (0.6 inches) black border. The numerals are to be in 100 mm (3.9 inches) black Helvetica Medium on an orange background.

2. Across the center of the primary hazard placard in 88 mm (3.5 inches) black Alpine Gothic or Alternate Gothic No. 3 numerals on a white background 100 mm (3.9 inches) high and approximately 215 mm (8.5 inches) wide and is outlined with a solid or dotted line border.

3. For hazardous materials in hazard classes that do not require placards, the identification number must be displayed on either an orange panel or on a plain white square-on-point configuration with the same outside dimensions as a placard.
